

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of the Claims:**

1. (Currently Amended) A computer-implemented method of publishing media data, comprising:

accessing a media interface of a media device;

capturing media data using a media capture component of said media device;

storing said captured media data in a media file in storage of said media device;

modifying said captured media data; and

publishing said modified media data to a network server;

wherein said capturing, modifying, and publishing are performed using an instant publish command of a media interface, which is accessed through a single and same operation of said media device;

wherein said performance of said capturing, modifying, and publishing using said instant publish command is made possible by initially configuring the media device with settings for edits, user metadata, and automatic metadata to be added to said captured media data, and by selecting a publishing recipient and any desired publishing rules provided by a selected publishing service.

2-3. (Canceled)

4. (Previously Presented) The method of claim 1, wherein:

said single operation is pushing one button on said mobile device.

5. (Previously Presented) The method of claim 1, wherein:

said instant publish command is accessed through a remote operation of said media device.

6. (Original) The method of claim 1, wherein:

said modifying includes editing said captured media data using one or more editing commands within said media interface.

7. (Original) The method of claim 6, wherein:

said editing includes changing an image represented by said media data.

8. (Original) The method of claim 1, wherein:

said modifying includes adding metadata to said captured media data.

9. (Original) The method of claim 8, wherein:

said metadata includes user metadata defined by a user of said media device.

10. (Original) The method of claim 9, wherein:

said user metadata includes author information.

11. (Original) The method of claim 8, wherein:

said metadata includes automatic metadata generated by said mobile device.

12. (Original) The method of claim 11, wherein:

said automatic metadata is generated when said media data is captured.

13. (Original) The method of claim 11, wherein:

said automatic metadata includes biometric information for the user of said mobile device.

14. (Currently Amended) A media device, comprising:

a control component;

a media capture component connected to said control component;

a media interface connected to said control component;

storage connected to said control component and to said media capture component; and

a network interface connected to said control component and to said storage;

wherein said media interface provides one or more media configuration commands to set one or more configuration settings, a capture media command to capture media data using said capture media component, one or more editing commands to modify captured media data, and a publish command to publish said modified media data through said network interface; ~~and~~

wherein said media interface is configured to issue an instant publish command that sets said capture media command, said one or more editing commands, and said publish command to capture media, modify captured media data, and publish said modified media data using a single operation element of said media device; and

wherein said instant publish command that sets said capture media command, said one or more editing commands, and said publish command using a single operation element is made possible by initially configuring said media device with settings for edits, user metadata, and automatic metadata to be added to said captured media data, and by selecting a publishing recipient and any desired publishing rules provided by a selected publishing service.

15-16. (Canceled)

17. (Previously Presented) The media device of claim 14, wherein:  
said single operation element is a push button.

18. (Canceled)

19. (Previously Presented) The media device of claim 14, wherein:  
said instant publish command causes said mobile device to modify said captured media device according to configuration settings set through said media interface.

20. (Original) The media device of claim 14, further comprising:  
a remote command interface for receiving and processing remote commands.

21. (Original) The media device of claim 20, wherein:  
said remote command interface provides a remote instant publish command.

22. (Original) The media device of claim 14, wherein:

said configuration settings include metadata to add to media data captured by said media capture component.

23. (Original) The media device of claim 14, wherein:

one of said one or more editing commands provides for modifying an image represented by media data captured by said media capture component.

24. (Original) The media device of claim 14, wherein:

said media device is a mobile telephone.

25. (Currently Amended) A system for publishing media data, comprising:

a media interface of a media device;

means for accessing said media interface;

means for capturing media data using a media capture component of said media device;

means for storing said captured media data in a media file in storage of said media device;

means for modifying said captured media data;

means for publishing said modified media data to a network server;

wherein said capturing, modifying, and publishing are performed using an instant publish command of a media interface, which is accessed through a single and same operation of said media device;

wherein said performance of said capturing, modifying, and publishing using said instant publish command is made possible by initially configuring the media device with settings for edits, user metadata, and automatic metadata to be added to said captured media data, and by selecting a publishing recipient and any desired publishing rules provided by a selected publishing service.

26. (Canceled)

27. (Currently Amended) A computer program, stored on a tangible storage medium, for use in publishing media data, the program comprising executable instructions that cause a computer to:

access a media interface of a media device;

capture media data using a media capture component of said media device;

store said captured media data in a media file in storage of said media device;

modify said captured media data;

publish said modified media data to a network server;

wherein said capturing, modifying, and publishing are performed using an instant publish command of a media interface, which is accessed through a single and same operation of said media device; and

wherein said performance of said capturing, modifying, and publishing using said instant publish command is made possible by initially configuring the media device with settings for edits, user metadata, and automatic metadata to be added to said captured media data, and by

selecting a publishing recipient and any desired publishing rules provided by a selected publishing service.

28. (Canceled)
